

eXPRS Procedure Code and Modifier Codes

Services in eXPRS are identified & defined by Procedure Codes and Modifier Codes. This is sometimes shortened as Proc/Mod.

- A Procedure Code identifies a service to be provided.
- A Modifier Code is used along with a procedure code to further define the service.

eXPRS considers a Proc/Mod combination to be a specific, unique service for system validation.

Proc/Mod combinations can also be restricted to a specific service element. This means the Proc/Mod combinations can be listed under 1 or more service elements.

Additional information on services is found in the [ODDS Expenditure Guidelines](#), which is a comprehensive document that reflects current ODDS Policy for authorizing these services to individuals.

Procedure Codes
