

Finding the Service Information for Service Delivered Import Files

Agency Providers will need to obtain different data points to create a CSV file to use in the Service Delivered Import Process. Incorrect data will cause your file to fail to upload.¹ This guide shows where to find five data points on the CSV File:

- **Column A:** The **Service Location ID** for the provider record used on the Service Prior Authorization. This number can vary for different individuals, even when billing for the same service.
- **Column B:** The **Service Element** listed on the Service Prior Authorization. This can vary for different services for that the same individual receives.
- **Column C:** The **Procedure Code** listed on the Service Prior Authorization.
- **Column D:** The **Modifier Code** listed on the Service Prior Authorization.
- **Column E:** The **Client Prime** of the individual being billed for.

Finding the Service Information for a CSV File

1. Select **Prior Authorization > Service Prior Auth > Find SPA.**

2. On the **Find Service Prior Authorization** page, enter the following criteria and select **Find**:

- **Status:** Select **Accepted** (Active authorizations that can be billed for)

¹ For specific details on setting up an import file correctly, see the guide: Overview of the Service Delivered Import Process and CSV Spreadsheet.

- **Effective Date:** Enter the first service date (e.g. First day of the month).
- **End Date:** The last service date (e.g. Last day of the month).

Find Service Prior Authorization

SPA ID:

Service Location/PSW SPD Provider ID:

Rendering/Agency eXPRS Provider ID:

Pay To Provider ID:

Client Prime:

Status:
